It’s NOT Because Our Tools Are Bad

Voiceover script · about 31 seconds

Everyone says uncertainty just means our equipment is clumsy.
Wrong.
Uncertainty isn’t a flaw in our measuring.
It’s built into nature.
A particle is described by a wave.
A tightly squeezed wave pins down position, but has a messy spread of wavelengths, which means a messy spread of momentum.
A smooth wave does the opposite.
It’s like a photo.
You can’t have a perfectly sharp snapshot and a perfect measure of motion blur in the same picture.
Except here, it’s not the camera.
It’s the universe.
Better tools won’t fix it.
Nothing to fix.
