The Heisenberg Cop

Voiceover script · about 26 seconds

Physics, please.
What is this quantum physics nonsense?
A cop pulls over Heisenberg.
COP: Do you know how fast you were going?
Heisenberg says,
HEISENBERG: No, but I know exactly where I am.
That’s the uncertainty principle.
The more precisely you pin down where a particle is, the less precisely its momentum is defined.
That’s basically its speed and direction.
Squeeze one, and the other gets blurry.
Heisenberg got a ticket.
Or didn’t.
It’s uncertain.
